Database & Catalogue

John Lennie

Introduction

The society held its first mushroom show in the fall of 1970 and a unified record of the species was kept until 1993. Shows were held in San Francisco, Oakland, San Rafael (once) and Coyote Point. In some years there were even three shows! Cumulative records were published twice. First, in "California Mushrooms: 1970-1980" by Herb Saylor, Paul Vergeer, Dennis Desjardin and Tom Duffy, an orange booklet which covered the first 19 shows along with 2 forays. It included literature references and sources for illustrations of the species. (These references are still useful, though dated, and copies of the booklet are available from Book Sales.) The second publication was in the Member's Handbook for 1992, by which time 24 more shows had been held, and the new lists, up to and including January 1992, were presented in one table, with 1009 species. I maintained the database at that time and compiled and prepared the lists. This Handbook is no longer available.

The show in December 1992 was the last to be added to this record. In 1993, the record was abandoned when Wade Leschyn took over managing a new database. Thirteen shows have been held since then (going by the information on the society's web site; the number would be 14 if there was a Coyote Point show in 1994.) However there was no longer a unified record of what was displayed at individual fairs and records for some fairs appear to have been lost.

In 2001 the council established a new Systematics Committee, with Mike Wood as chair and maintaining the database as one of its functions. I took over the database with the goal of adding descriptive material for local species, as well as foray lists and collections displayed at shows. The names I started with were drawn from Wade's database and Mykoweb, updated and corrected; this is the context for the "not recently recorded" names on page 5. Now, after the Oakland show, the new cumulative record contains 949 taxa (including species complexes and varieties.) In Oakland, for the first time, some of the display labels included common names, synonyms, misapplied names and habitat information supplied by Mykoweb (for an example, see page 25.) Family names on the labels (see also pages 6-11) were taken from the CABI Biosciences database, source for the imminent and authoritative 9th edition of "Ainsworth and Bisby's Dictionary of the Fungi." The display labels and this document are the first fruits of the new database.

The figures and lists in this report would be impossible without the huge efforts of many volunteers.

John Lennie

Statistics (all figures exclude "sp.")

***Mycological
Society of San
Francisco***

Total collections: 296
Total records (counting separately each occurrence
on a different foray): 526

**Numbers of species reported from 1 foray, 2 fo-
rays, ... , 9 forays (multiplicity is not abundance -
multiple records from one foray are merged):**

prepared: 28 (location unknown)

Foray 21 - U.C. campus, Berkeley
Anna Moore

1 species, including 0 found only on this foray

Agaricus xanthodermus

Foray 22 - hills behind Sausalito, Marin Co.
Peter Werner

3 species, including 0 found only on this foray

Amanita lanei	Boletus satanas
Boletus chrysenteron	

***Mycological
Society of San
Francisco***Foray 23 - Presidio, San Francisco
Peter Werner

10 species, including 1* found only on this foray

Agaricus augustus	Helvella lacunosa
Agaricus xanthodermus	Lepiota spheniscispora
Amanita muscaria	Macrolepiota rachodes*
Chroogomphus rutilus	Marasmius plicatulus
Clitocybe flaccida	Suillus pungens

Foray 24 Jackson State Forest, Mendocino Co.

5 species, including 1* found only on this foray

Alboleptonia sericella	Coprinus comatus
Amanita muscaria	Russula brevipes*
Boletopsis leucomelaena	

Foray 25 - west Marin Co.
David Campbell

16 species, including 4* found only on this foray

Agaricus praeclaresquamosus	Lactarius deliciosus
Amanita muscaria	Lactarius rufus
Amanita phalloides	Polyporus elegans*
Armillaria mellea group	Ramaria myceliosa*
Gomphidius oregonensis	Russula cessans*
Gymnopilus sapineus	Russula eleodes
Gymnopus villosipes	Russula queletii*
Hypholoma fasciculare	Tricholoma imbricatum

Foray 27 - San Luis Obispo area

1 species, including 0 found only on this foray

Lepiota cristata
